"All diseases begin in the gut" - Hippocrates

Enteric disease of poultry is multifactorial. But the major challenge is through infectious agents like bacteria such as *E.coli*, *Salmonella* and *Clostridium* spp. The gastrointestinal microflora of chicken plays very important role in health, immunity and performance of the birds

Numerous reasons for gut health issues

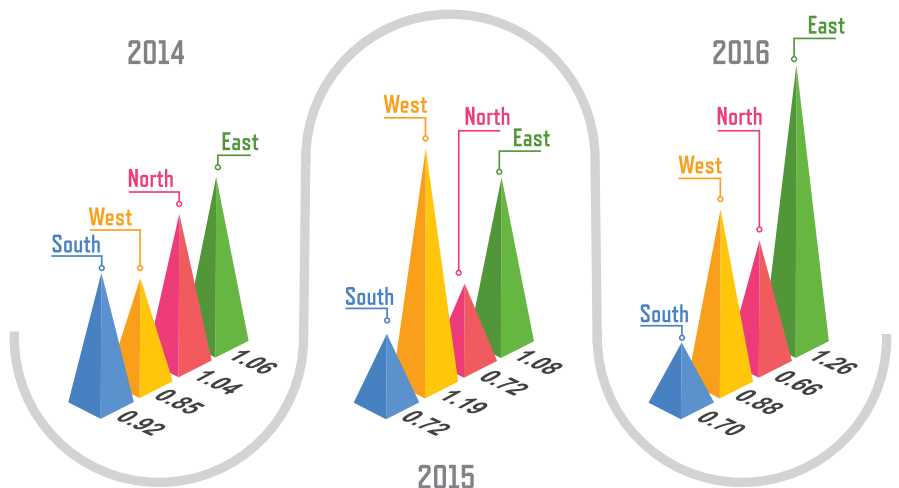

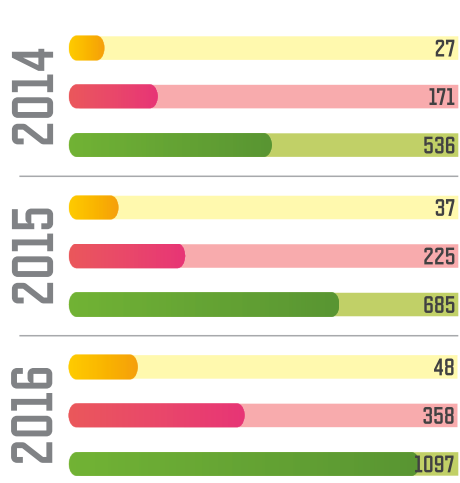

Gut infections can be a major source of efficiency loss, downtime and additional costs for treatment. This can negatively influence poultry health, performance and profitability of the farm.
