

LYSOFORTE® DRY

LYSOFORTE is a nutritional emulsifier – based on lysophospholipids – designed to enhance digestion and absorption of energy-rich feed ingredients, including fats, oils and fat-soluble nutrients in livestock and poultry feeds.

By optimizing the three steps in fat digestion – emulsification, hydrolysis and absorption – LYSOFORTE provides producers a more consistent fat utilization response, enhanced nutrition absorption, improved feed efficiency and better feed cost control.

MODE OF ACTION

- Forms small, stable oil-in-water emulsion droplets
- Provides more exposed surface area for fat hydrolysis by lipases
- Enables formation of smaller, more stable micelles
- Enhances absorption of fats, oils and fat-soluble nutrients like pigments and fat-soluble vitamins
- Positively impacts gut morphology and intestinal integrity¹

FEATURES AND BENEFITS

- Supports growth performance and feed efficiency^{2,3}
- Contains lysophospholipids that help improve fat and fat-soluble nutrient digestion and absorption^{2,4}
- Aids in nutrient digestion for young animals
- May be used to replace high-energy ingredients, like fats and oils, in diets for feed cost savings
- Available in a dry, heat-stable form suitable for pelleting

STORAGE

- Store in a cool, dry place out of direct sunlight for maximum shelf-life

APPLICATION RECOMMENDATIONS

**Efficient and easy to incorporate in premix/
concentrates or complete feeds:**

Starter swine and broilers: 0.5 - 1 kg/tonne of feed

Can be applied either:

- "On top" of the existing feed formula for enhancing performance
- In a reformulation strategy using an energy matrix value to save feed costs
